

G4S Risk Management's specialist training division provides security and safety awareness training for employees of government and commercial organisations who are deploying to locations that are hostile or hazardous.

## Overview

Our Hostile Environment Awareness Training (HEAT) course is specifically designed to prepare clients who are travelling to or will be living in hostile or hazardous environments. Students are trained to recognise and avoid potential threats and are equipped with the skills to respond to incidents should they occur.

The course addresses clients' potential security environment and stresses the importance of travel pattern analysis, surveillance detection and attack recognition. We believe that by increased awareness, supplemented by the necessary skills required to deal with a range of challenging situations and environments, individuals will be better prepared to mitigate the risks to personal safety and security.

The course combines theory with relevant practical experience and has consistently been at the forefront of innovative, realistic and effective training. We recommend our standard 3 day course, however the course curriculum and duration can be adapted to suit the needs of the client. Our HEAT course can be modified to meet clients' regional or operational requirements, although a syllabus of core modules is recommended.

## Our staff & facilities

The course is conducted at our training facility in Pershore, Worcestershire. Our team of highly experienced instructors are former UK Special Forces and police personnel who have recognised civilian teaching qualifications and recent operational experience. Their proven capabilities and our facilities ensure we deliver a learning experience to enable clients to work and live confidently and securely in hostile environments.
