Secure Trax®

Fusing people, process and technology

Enhanced security as standard

G4S security officers now come equipped with Secure Trax® as standard. Combining innovation and quality guarding, we empower our customers with fully transparent and technology-led armament, ensuring maximum visibility of their security and safety provision.

Designed to provide total visibility, this integrated management system provides accurate, retrievable security intelligence across any number of sites.

G4S

Securing Your World

Enhanced security as standard

At G4S, we believe in driving innovation to provide the best service offering to our customers. Secure Trax® enhances your security with real-time data to support your decision making. Designed to provide total visibility, this integrated management system provides accurate, retrievable security intelligence.

Using the latest mobile technology, you will be able to amend and review performance, as well as reassign and redeploy guarding operations, based on data inputted.

Secure Trax will enable you to improve your security efficiency, identify trends and mitigate risk in a cost effective and time saving manner.

You will be supported locally by your designated contract manager who will manage your specifications from design to installation, with technical demonstrations available for ongoing support.

G4S Insight

At G4S, we believe that knowledge is power. By pooling your security information on your secure customer portal - G4S Insight, you gain complete control, with the ability to store, retrieve and analyse information. Via password protected access, you can gain a clear view of business critical data such as compliance, to support your management information and create reports.

Guard Tour

Combining capabilities of proof of presence technology and GPS tracking enables security officers to confirm their patrol activity in real-time, at pre-determined points around your site via RFID (radio frequency identification). The scanned information is passed to the customer portal, G4S Insight, to allow you to track movements. Guard tours can be customised to your needs for each location helping to ensure tour compliance.

Incident Notification

Security risks and incidents are reported in real-time by your G4S security officer via SMS or email alerts. The immediacy of capture and uploading Secure Trax allows, gives you timely notification and enables swift action to be under taken. This can be particularly important when critical incidents such as fire alarm activation, suspicious activity or theft occur.

Facility and Safety Inspection

Security officers can be given specific instructions at any point of their patrol, from carrying out additional security checks to ensuring locations are powered down appropriately as well as conducting health & safety checks.

Time and Attendance
(Post Compliance)

Automated officer check-in/check-out via GPS or scanned bar codes.

Daily Activity Reports

Complies all officer activities including inspection, guard tours and incidents.

Secure Trax®
Benefits to you
