

Critical Infrastructure Protection

There are 10 sectors designated as Critical Infrastructure in Canada, the protection of which is vital not only to your organization but to the health, safety, security and economic prosperity of our society. G4S Corporate Risk Services has acquired a deep and strong bench of consultants who are recognized experts in the complex discipline of Critical Infrastructure Protection.

Specialized Vulnerability Assessment

Critical Infrastructures have unique operations and assets. G4S offers specialized vulnerability assessments detailing all aspects of the strengths and weaknesses of protective systems.

Interdependency Analysis

A key differentiator of Critical Infrastructure is the propensity for infrastructure sectors to be interdependent upon one another. G4S offers detailed interdependency assessment services, tailored to each organization's unique needs. Understanding these interdependencies allows for the creation of more robust protection solutions.

Physical Infrastructure Network Identification

Critical Infrastructures are distributed into physical and logical networks, and a thorough understanding of these network structures is critical to identifying systemic vulnerabilities. Our consultants have the

requisite expertise to identify vulnerabilities and risks that would otherwise go undetected.

Critical Infrastructure Risk Assessment

Asset criticality, service delivery expectations, physical network topography and sector interdependency all cause Critical Infrastructure Protection to be a complicated pursuit. G4S offers comprehensive risk assessment services that consider each of these elements.

Critical Infrastructure Protection Program Development

We work with our clients to develop organization-wide protective strategies to secure Critical Infrastructure. Our team of consultants can navigate complex security problems and develop programs that result in a Critical Infrastructure that is robust, fault-tolerant and resilient against deliberate, accidental and natural hazard threats.
