G4S MONITORING CENTER
INTERACTIVE VIDEO MONITORING

What is Interactive Video Monitoring?

Interactive monitoring utilizes your existing or proposed video system in **REAL TIME** to protect critical assets and people. G4S trained operators use advanced tools like video analytics and voice over IP to extend the capability and values of your video surveillance system. When a video analytic rule is violated, an alarm is immediately sent to the G4S Monitoring Center along with a short video clip indicating the nature of the violation (i.e. a person within a fenced perimeter after hours or a vehicle parked where it should not be). Rules can be as simple as detecting the presence of a person in a prohibited area or configured for more complex applications.

Using this information, our operators evaluate the nature of the threat and use customized instructions to take appropriate action. Common actions can include notifying an on-site guard, making an announcement via a speaker, or contacting local authorities. These actions can help to mitigate damage until a local guard or authorities arrive. In addition, Interactive Video Monitoring can be coupled with your other security systems such as intrusion detection, fire alarm systems, access control systems, and panic buttons, etc.

Features of this service:

- Converts your video management system from a reactive to a proactive security measure.
- Reduces the cost of a guard(s) on-site and acts as a force multiplier.
- Cost effectively covers large areas.
- Can be added to existing video management systems and cameras.
- Video analytic setup and maintenance is done remotely by the G4S Monitoring Center.
- Mobile device App can alert you to any alarm events received and provides live and recorded event video.
- 24/7 monitoring center provides supervised response with fully customized reporting.

Ideal Applications for Event Monitoring Services:

- Outdoor storage of valuable goods (i.e. construction sites, building supplies, equipment, vehicles, and boats).
- Unmanned facilities (i.e. telecom towers, chemical and power substations, and water treatment plants).
- Parks, outdoor recreation facilities, sports venues, churches, and schools (especially after hours).
- Warehouses, loading docks, automobile and heavy-duty equipment dealerships.
- Shopping Centers, High-rise and Gated Communities, office buildings, and parking lots.
