

ATM OPERATION

The activities of the Centers of Cash Processing are followed by ATM operation which provides filling and emptying cassettes and keeping records of money movements. The transport of cassette is performed under the same principles as in the case of other cash consignments.

Apart from ATM filling, we also provide **service, inspection and maintenance.**

- » **Cassette replacement**
- » **Processing of the cash remaining in the cassettes**
- » **Filling cassettes with cash**
- » **Reporting on processes cash**
- » **Deposits to cassette filling maintenance**
- » **Supplies for the CNB**
- » **ATM service**
- » **ATM inspection**
- » **Refilling of needed material and promotional stickers**
- » **ATM cleanliness maintenance**

ATM INSPECTION

ATM INSPECTION INCLUDES:

- » Distributor inspection.
- » Separate device inspection (advert, heater , etc).
- » Power pack, power supply inspection.
- » Supply extension inspection.
- » Supply cable or connection cable 1F inspection.
- » Hardwired 1F circuit finished with a socket inspection.
- » Final report on an inspection performed – directly from an inspection engineer according to Regulation. no. 50/1978, Coll.. Sec. 9.

ADVANTAGES OF G4S ATM INSPECTIONS

- » For bank entities, the obvious advantage is a **definite reduction of costs in the form of synergies.**
- » The schedule of inspections will be adapted so that **within one day it were possible to inspect as high a number of ATMs as possible.**
- » A trip for the purpose of ATM inspection is performed by only one vehicle with a district engineer and a security ATM employee
- » Our service engineers are **also inspection engineers in the field of electricity. We can arrange inspections for you of not only security technologies (PZTS/EZS, EPS, CCTV, SKV, MR, ATM...), but also of electrical appliances**
