

GPS MONITORING

"We can provide you with a complete service of truck monitoring"

- if a non-standard situation is identified **we will send a mobile patrol, which will deal with the problem and will inform the head office**

SERVICE PARAMETERS

- **24 hours**
- All the information about the movement of the vehicle is collected **in the monitoring centre of G4S, where it is recorded into a log/report in real time**
- The vehicle can be tracked on a map **according to a planned route** or we offer the possibility of tracking only **the movement of the vehicle itself**

USE:

- In businesses or for private purposes (vehicle location)
- Can be used also outside the Czech Republic

PHYSICAL ESCORTS

"We will provide a security escort and tracking of the movement of your cargo by means of a GPS system and a patrol"

HOW THE SERVICE WORK:

- A patrol at the place of departure checks **the technical condition of the vehicle** with regards to its roadworthiness
- **A patrol is also present at the loading**, and after the vehicle is loaded, **it will secure the vehicle, test the connection between the head office and the truck driver.**
- After the vehicle departs **it monitors the situation around the vehicle, driver's behaviour, traffic restrictions detours**, and potentially, together with the truck driver, a change of the route is planned
- The mobile patrol **continuously informs the head office about the situation and escorts the vehicle to its destination, where it hands the vehicle together with the driver over to the entity intended.**
It shall also pick up a **certificate** confirming that **the vehicle with valuable load was transported to the destination and to the customers intended.**
- The escort patrol can drive in a **marked/unmarked or armoured/unarmoured vehicle.**
- If a non-standard situation occurs, **the patrol also secures the respective documents, evidence, immediately informs the head office, local police.**

USE:

- Transport of valuable loads
- Can be used also outside the Czech Republic
