KEY CONTROL
EXPLAINED

Not having the right key at the right time is not only frustrating but is a security risk that could potentially stop your business in its tracks.

Putting your keys in a key box or locked in a desk drawer may seem a simple solution but it soon becomes complicated. The challenge with this traditional method of key control is that it is inefficient and unreliable and makes tracing keys an almost impossible task.

Keys grant access to your organisation's most valuable assets and should be protected accordingly.

Electronic key control simplifies the process by checking access permissions and creating an audit trail every time a key is removed or returned. But there's much more that an electronic key management system can do.

THE BENEFITS OF **ELECTRONIC KEY MANAGEMENT**

Create accountability
with your staff knowing they are responsible for the keys they use

Increase productivity
by reducing the time spent locating keys

Lower costs
replacing keys and locks due to lost or stolen keys

Reduce risk
by tracking and auditing keys in real-time

Ensure only authrised access
to specific keys by assigned staff

Improve safety and security
by ensuring sensitive keys don't get in the wrong hands

TOUCH PRO

Our intelligent key management systems secure, manage and audit the use of every key in your business.

Touch Pro is our most secure and sustainable cabinet to date and is available in four different sizes, managing anywhere from 5 to 720 keys.

In partnership with Traka

Touch Pro M (up to 40 keys)

Touch Pro V (5 keys)

Touch Pro L (up to 720* keys)

Touch Pro S (up to 480* keys)

FEATURES AND FUNCTIONALITY

- Built to last
- Built for flexibility
- Built for simplicity
- Built for sustainability

iFob™ uniquely identifies keys and locks them in place

Easy access via a wide range of identification

Unique electro-mechanical secure lock with affirmative locking action

Networked or standalone solution

Modular and scalable to fit the needs of your business

Configurable door finish options including transparent or solid

Peace of mind during a power failure with uninterrupted access for up to 14 days

Adjustable control pod height on the Touch Pro L for improved accessibility

CUSTOMISABLE **FEATURES**

Set curfews
to ensure keys are returned when required

Send email notifications
for issues such as curfews or faulty items

Get real-time reporting
with a full audit-trail

Remotely release keys
to authorised users

Ensure keys are returned
before users leave site

Log faults
for vehicles and equipment

Our web solution is a browser-based administration software for centrally managing your key management systems from any authorised device, anywhere in the world. Features of a fully integrated solution:

Simplify your administration by integrating our software with your existing third-party system to use the data you already have and make your keys work for you like never before.

A FULLY **INTEGRATED SOLUTION**

Through integration with access control platforms, Traka provides enhanced security, reduced administration and an improved experience for key handlers.

Improved Security

Episodes of lost and misplaced keys can be addressed through the access control integration. Staff members holding keys can be prevented from passing through a security point, until they have returned their keys to the cabinet.
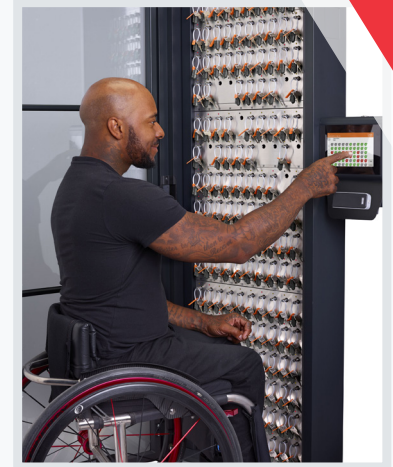

Reduced Administration

When deployed in integrated fashion, existing access control or HR systems are used to manage key access - based on job roles or groups. This means access to keys - for an individual or group - can be invoked or revoked through a single operating platform without the need to manage multiple systems.

For the security team, events at the key cabinet can be made visible in the access control system through an easy to follow audit trail and alert system. As all events are recorded in the access control platform, time spent analysing and reporting is reduced.

Improved Experience

When access to the key cabinet is managed through the access control platform, users are able to use a single method of access - often a physical card , fob or mobile device. This simplifies things for the user by reducing the number of keys and credentials the user needs to carry.
