Number of engineers: **15**

Number of years experience at G4S: **121 years**

Number of years industry experience: **197 years**

Number of personal accreditations: **55**

Main Area Of Design Expertise:

Fire: **8 engineers**

Integrated Security: **7 engineers**

Why Use The G4S UK Design Team?

G4S has a very experienced and well resourced design team, with not only many years of design experience in either fire or security, but also many years of working at G4S. This gives the team strong stability, as well as in-depth knowledge of the G4S product range and leading edge technologies in the industry.

In addition, every member of the team is extremely well accredited, as well as very experienced. This personal experience is invaluable in designing complex systems as, invariably, someone will have come across any challenge before.

This team is one of the most capable in the UK for designing integrated solutions, combining not only security systems but also other systems such as building control and payroll systems, that not only helps to reduce the cost of theft and vandalism, but also helps to reduce energy and rental bills by increasing space utilisation.

By using G4S, you will not be disappointed
