I UNDERSTANDING WHAT'S IMPORTANT TO YOU.

At G4S, we work with thousands of manufacturing businesses, large and small to mitigate threats which can result in production interruptions, health and safety challenges, and site intrusions.

We have proven expertise in building safe, secure and regulated environments.

Using a consultative approach, G4S works with clients to assess the areas of risk and develop a bespoke plan for each site, which may include changes to physical security, technology, procedures, and guarding.

While there are significant differences between manufacturers, which impact their security requirements, there are also many areas of focus that are common to all manufacturers, these include:

- Protecting employees, visitors and assets.
- Protecting business information and company reputation.
- Implementing a robust approach to HSE.
- Ensuring business continuity & shrinkage reduction.
- Balancing risk whilst driving efficiencies.

2 START WITH THE PROBLEM

In security, one size does not fit all.

Security is only effective if it is relevant and fit for purpose, we always start with identifying your risks and evaluate:

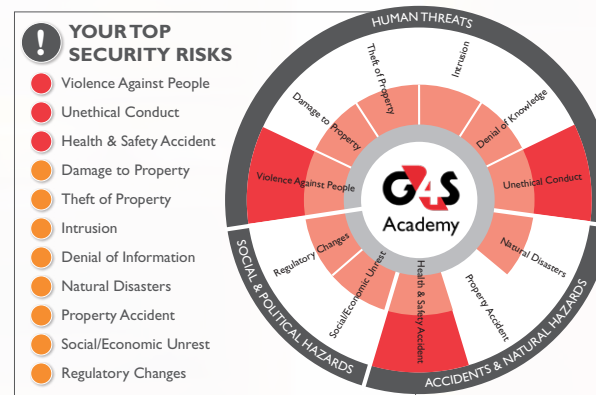

This will then enable us to make an informed decision on how best to protect your assets.

G4S will carry out a free risk assessment of your premises and then design a solution to mitigate your risks and match your budget.

We also have a free online risk assessment that asks you a series of questions, then provides you with an initial indication of where your security should be focused by producing a personalised risk radar report.

Start preparing now by completing our free online risk assessment

- 5-10 minutes to complete
- Free of charge
- Produces a Personalised Risk Report

3 DESIGNING THE SOLUTION

Security responsibilities on manufacturing sites can be extremely broad. Security works best taking an integrated approach, using a combination of physical security, technology, and guarding.

Our comprehensive range of in-house security service includes:

9. CCTV

Inside and outside the premises CCTV can provide video analytics to highlight unusual activity at the perimeter or suspicious or unusual behaviour on the production line.

8. First Response Team

Also known as Plant Protection Officers, this team is on hand for all medical, environmental and fire related incidents to reduce escalation and administer critical care before the blue light services arrive.

10. Canine Security

G4S canine provides a highly visible deterrent for protesters or a cost-effective method to screen people, locations or vehicles at scale, providing early detection of intruders, explosives or drugs.

11. Intruder Alarm

Intruder detection and alarm systems use various devices to detect and warn people using visual and audio appliances when an intruder has broken into a building, normally out of hours.

1. Intercom on car park barrier with guard

Using our 24*7*365 Alarm Receiving Centre, our operators are permanently on hand to provide verbal assistance when a request for assistance is triggered from site. Whether it is parking access, gate opening or remote incident response.

2. ANPR - Car park barrier with CCTV

Installing ANPR in combination with your CCTV system provides many benefits including automatically controlling site access and facilitating access to your car park.

3. Gatehouse Security

Gatehouse Security Officers will oversee the access and egress of people and vehicles onto the premises. They will have access to the CCTV to monitor movement around the site perimeter and link closely with the control room.

13. Searching and Screening

Our teams perform manual and technology enabled searching and screening to identify restricted items being brought into, or taken out of the production area.

12. Perimeter Protection Fence

Fencing provides a clear deterrent to potential intruders and can be supplemented with detection to raise an alert in the event of unusual or suspicious activity.

7. Patrol and Incident Response

We supply flexible, regular or random patrols and mobile incident response by uniformed officers in clearly identified vehicles. Their mere presence acts as a visible deterrent to criminals.

6. Fire Exits

Our Fire and Life Safety Systems exist to ensure early detection of a fire and provide easily accessible exit points for use in the event of an emergency.

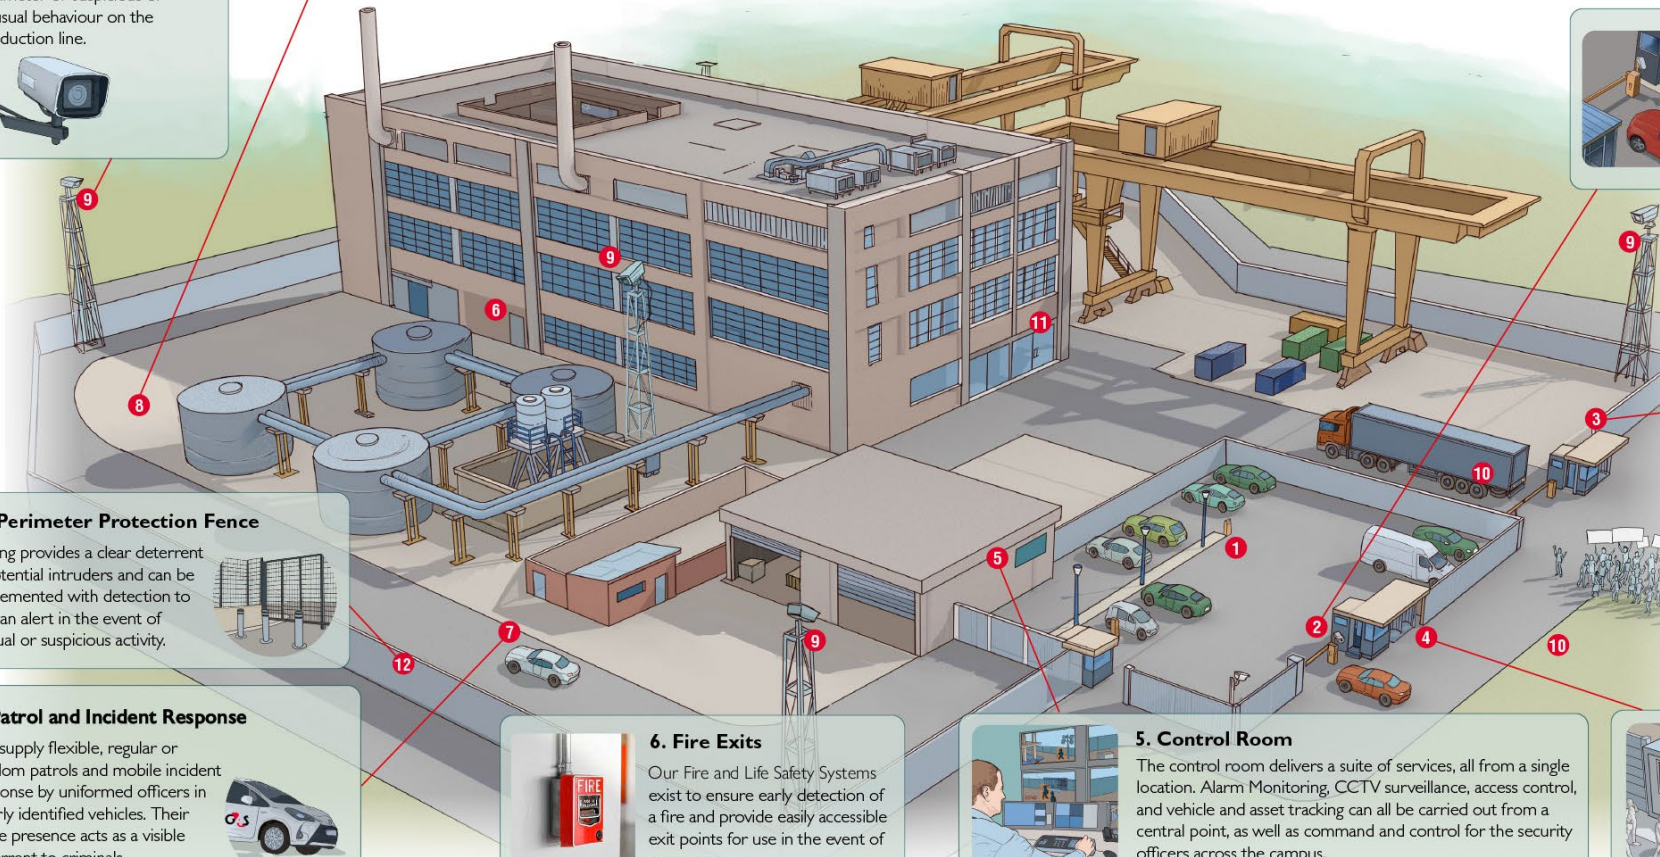

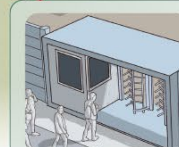

5. Control Room

The control room delivers a suite of services, all from a single location. Alarm Monitoring, CCTV surveillance, access control, and vehicle and asset tracking can all be carried out from a central point, as well as command and control for the security officers across the campus.

4. Access Control Turnstiles

Our access control turnstiles restrict and control the speed of access to the site.

Combining safety & security

G4S places an enormous focus on training.

When it comes to creating and training a safety and security team, it is not a case of 'one cap fits all'. In partnership with you, G4S reviews the safety risks involved and develops a bespoke solution which involves the team undertaking training that is built around the specific need, rather than simply undertaking generic training.

The training may include:

Fire Training

Delivered by serving or ex fire and rescue professionals. This training simulates real-life scenarios for their deployed site.

Medical Training

The team are ready to provide first response and deal with a range of incidents including heart attacks, strokes and catastrophic bleeds.

Environmental Training

Officers are trained to investigate any hazardous environmental spills or incidents that may occur in the site sewage network.

5 PERFORMANCE MONITORING

Our operational management platform drives better decision making through data and trend analysis, providing you with:

- Optimised resource planning and allocation
- Ensuring and evidencing compliance
- Real-time reporting
- Accurate pay and invoicing based on shifts worked
- Confidence that you have the right staff and duties are validated
- Improved decision making through data/trend analysis

6 SUSTAINABILITY

G4S is committed to operating in a sustainable and ethical manner. We believe that sustainability is essential to our long-term success - and that it is a core responsibility for us to play our part.

Here are our four sustainability strategy pillars with some of our initiatives:

People

✓ A Women's Initiative Network

Designed to create a safe space for female colleagues to share concerns, ideas and support each other.

✓ Wellness Action Plans

1 to 1 confidential conversations, to preserve positive mental health.

✓ Social Recruitment Advocacy

Network member which supports recruitment from diverse groups.

Planet

✓ Net Zero Transition

G4S is committed to net-zero emissions by 2050.

✓ Environmental Management System

We are ISO14001 accredited across our estate.

✓ Renewable Energy

Since 2020, we now procure all our electricity for the UK operations from renewable sources.

Community

✓ Careers Support

Delivering career talks and supporting young people with mock interviews and advice.

✓ Fundraising

We encourage volunteering and fundraising amongst our employees and offer matched funding for employee fundraising.

Partnerships

✓ Welfare Partnerships

Providing wellbeing support services for employees and their families, such as financial and legal advice; mental health support; online GPs.

7 FIVE REASONS WHY G4S SHOULD MANAGE YOUR SECURITY

G4S is the biggest security company in the world, but our teams operate at a surprisingly local level. We've achieved our success by providing outstanding service and value to companies of all sizes.

Our reputation is global but our service is at the heart of local business. Here's what you can expect:

1

UNDERSTANDING OF THE SECTOR

Specialist knowledge of building security solutions in the Manufacturing & Logistics sector.

2

SCALE OF SERVICES

Consolidate your security supply chain, we offer Risk Management, Integrated Electronic Security Systems, Onsite and Mobile Guarding, Canine and Lone Worker Protection Systems and a 24/7 Security Operations Centre.

3

NATIONAL OPERATION

Integrated operational systems across multiple locations to provide transparent, consolidated management information and monitor performance against contract SLA's.

4

YOUR TEAM

Our officers are trained in emergency care provision to provide initial incident response. Our area relief teams provide cover during unforeseen absences or additional support at short notice.

5

SOCIAL VALUE

Our social responsibility programme is underpinned by four pillars: people, planet, communities and partnerships. We work with our customers and the communities we protect to be a 'force for good', towards positive change.

8 OUR CUSTOMERS

We work with some of the UK's leading manufacturing companies including:

Security service delivery improvement

Introducing the G4S Academy

We go far beyond delivering security.

Joining the G4S Academy provides access to exclusive threat reports, thought leadership content as well as an opportunity to network with other security experts.

You will have access to:

Regular risk bulletins, threat reports and white papers

Event and seminar invites to hear the latest market evolution and trends

An innovation forum which addresses emerging trends and technologies

Podcast and webinars discussing security hot topics with leading experts
