

What if no one is at home?

To protect your home and valuables when no one is at home, we can install intruder and smoke detectors that will automatically set off an alarm if someone enters the home or if smoke is detected.

We survey your home and discuss how you want the alarm to operate to best suit your life style. Detectors are connected to a key pad programmed to operate in zones so that you can set the alarm in certain areas while still being able to move around freely in others. Installation can be done in a few hours and all components come with extended warranties.

What are the key features & benefits?

- Our equipment comes with 24 hour battery back up
- Warning signs are fixed to your gate / exterior walls to deter criminals
- Regular drive-by, high profile security patrols are conducted around your neighborhood
- The systems never sleeps and is monitored round the clock 365 days of the year
- Response teams are highly trained, well equipped and security vetted
- A risk assessment of your home security is included
- Emergency alarm systems incur no up-front equipment costs

Alarm Response Service

Do I need an emergency response service?

A security, fire or medical emergency can occur when you least expect it. Our Response Service gives you the assurance that in an emergency, assistance is just minutes away.

How does it work?

A number of panic buttons are installed at your premises. In the event of an emergency you press a panic button, which sends a signal via a transmitter. On receipt of a panic alarm signal, our 24 hour Central Monitoring Station immediately dispatches the nearest Alarm Response team.

Can I be sure of a quick response to emergencies?

A response team is dispatched as soon as we receive an alarm. While a response team is en route, we call you to establish the type of emergency and send additional support if required.

All Alarm Response teams are highly trained and equipped to deal with a variety of emergency situations.

Why choose G4S?

G4S is the world's leading integrated security company.

A GLOBAL BUSINESS

OUR EMPLOYEES

OUR EXPERTISE

Is the technology reliable?

With tens of thousands of subscribers across Africa, our system has proven its' reliability even where power is intermittent or unstable.

The system comes with a back-up battery that keeps your alarm operational for up to 24 hours. Alarm signals are sent using radio or cellular networks (GSM).

With great coverage across Ghana and a built-in back up, your alarm will be received within seconds of you pressing the Panic Button.

What about installation & maintenance?

The system is virtually maintenance free and 'self tests' to ensure everything is functioning perfectly. We will visit regularly to change the battery; maintenance is included in the subscription fee.
