## CURRENT SITUATION

### LATAM Situation in Numbers

**11,154,923**

**Total Confirmed Cases**

**1.04x**

**Increase in Reported Infections from Oct. 20-27**

**10%**

**Case-Fatality Ratio in Mexico**

**107.09**

**Deaths in Peru per 100,000 Population**

### Overview

**As of Oct. 29, G4S Corporate Risk Services assesses that the geographic risk environment for coronavirus disease (COVID-19) transmission in Latin America is HIGH.** According to data obtained from local governments, Johns Hopkins University, and the World Health Organization (WHO), there have been at least 11,154,923 confirmed cases of COVID-19 and 397,317 associated deaths in Latin America, making it the region with the highest number of total cases (25% worldwide) as well as total deaths (34% globally). As indicated by the WHO's Weekly Epidemiological Update published on Oct. 27, the disease has spread to more than 50 countries, territories and areas throughout Latin America. On Aug. 6, the U.S. Centers for Disease Control and Prevention (CDC) released COVID-19 Travel Recommendations that assessed most destinations in the region as Warning - Level 3: Avoid Nonessential Travel. Additionally, the U.S. Department of State has since issued updated country-specific Travel Advisories that currently assess nearly a quarter of the region as Level 4: Do Not Travel.

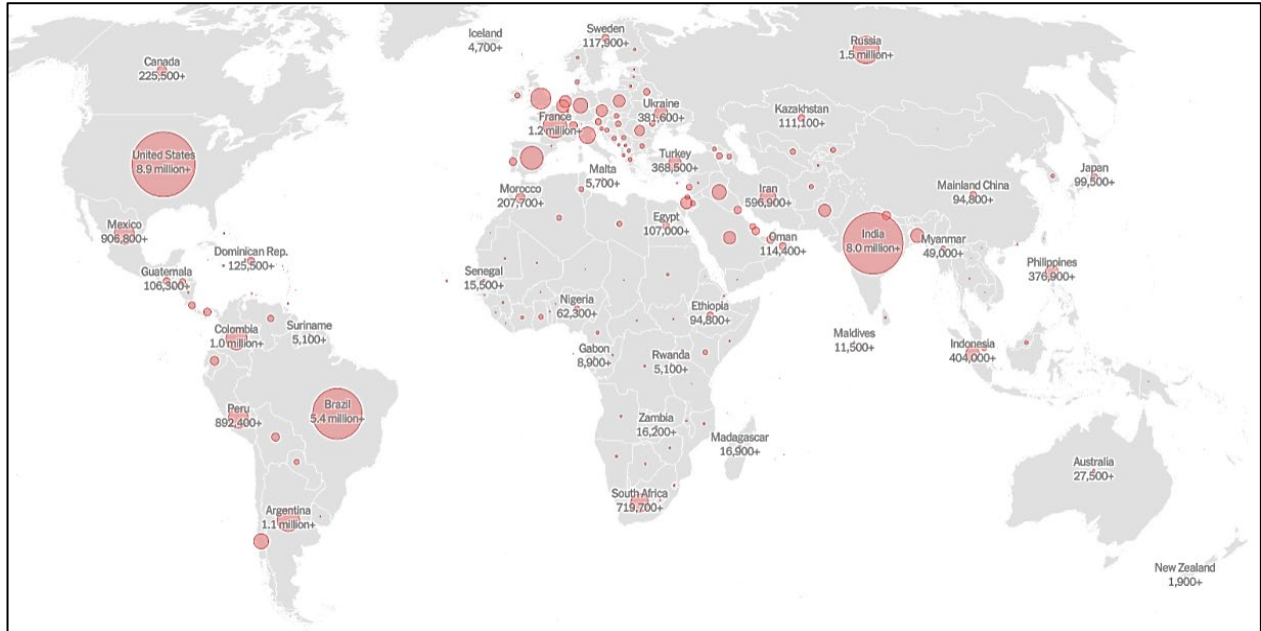

#### Highlights:

- The WHO recorded on Oct. 27 a total of 10,973,563 confirmed cases of COVID-19 infection in Latin America compared to 10,536,315 cases a week earlier, a 4% increase.
- Brazil (population est. 212 million) remains the epicenter of the outbreak in the region, with 5,468,270 confirmed cases of infection and 158,456 deaths. The country accounts for almost 50% of all cases and 40% of all deaths in the region. São Paulo state has reported at least 1,103,582 cases, 20% of Brazil's total number. However, Roraima, Distrito Federal, and Amapá have been the top three hotspots based on cases per 100,000 population.
- Peru (population est. 32 million), with at least 892,497 confirmed cases and 34,257 deaths, and Argentina (population est. 45 million), with 1,130,533 confirmed cases and 30,071 deaths, have the highest numbers of recorded deaths per capita in the region.
- Of countries with 5 million people or more, newly reported coronavirus cases in the last seven days are higher (daily average  $\geq 4$  new cases per 100,000 population) and staying high in: Argentina, Colombia, Brazil, Peru, Ecuador, Chile, Mexico and the Dominican Republic.
- Mexico and Guatemala have seen the highest growth in newly reported deaths per capita over the past 14 days.
- Argentina had a daily average of 13,315.4 new cases in the last seven days (29.9 per 100,000 population) and a daily average of 364.6 new deaths (0.8 per 100,000).
- 516,021 COVID-19 deaths in the region are forecasted by Feb. 1, 2021, according to a University of Washington forecast model. This represents a 30% increase in deaths from the present figure.
