

G4S Secure Integration owns and operates a UL Listed and CSAA 5 Diamond Certified Monitoring Center that uses advanced technology to protect critical assets and people. Acting as an extra set of eyes, the highly trained Monitoring Center staff helps to provide peace of mind for our clients.

G4S MONITORING CENTER VIDEO VERIFICATION SERVICES

What is Video Verification Service?

Unlike our Interactive Video Monitoring Service, which uses live, streaming cameras viewed by G4S operators as a result of an alarm, video verification uses lower cost battery operated and wireless cameras/motion detectors. These devices will record and transmit a 10 second video clip to our monitoring center when triggered by the presence of a human or a vehicle (using PIR, Passive Infrared technology). Operators use this to verify the nature of the alarm event and take appropriate action. This reduces the need for high bandwidth internet connections and often more costly streaming camera installations.

Features of this service:

- Detects intruders more effectively and reliably than a standard burglar alarm system.
- Less costly and easier to install than a full-scale video system.
- Alarms and video clips can be transmitted directly to your smartphone.
- Meets most Police Department's requirements for "verified alarms" and reduces the number of unnecessary dispatches.
- Customized Reports

Ideal Applications for Video Verification Services:

- Office buildings
- Warehouses
- Schools
- Vacant Properties
- Construction Sites
- Manufacturing
- Rooftop HVAC Units
- Transit
